

Shiner Showcase

Roofing

Shiner Roofing, Siding and Windows has recently completed a project in Potomac, Maryland that we would like to show you. On this property we performed a complete roof replacement, changing the shingles from cedar shake to genuine slate.

We started the project by removing the existing layer of cedar shakes, which had become warped and overly weathered over time. Then, GAF/ELK Deck Armor synthetic underlayment in conjunction with GAF Weather Watch membrane was installed along all walls, penetrations, chimneys, valleys and the gutter line. These products allow the home to breathe while protecting it from outside environmental forces. The new roof was then installed – a GAF TruSlate genuine slate roof – which gives the home a distinct, luxurious feel.

Across all roof ridges, we installed TruSlate Ridge Vents, protecting the home from excessive heat and moisture. Copper flashing was then applied along all roof intersections, and at all walls, chimneys and cupolas. Installation was finished with copper drip edges along all gutter eaves, and copper drip edges along all rake edges, including copper snow guards along all gutter eaves.

The result – a home renewed with the charm and lasting appeal of a lighter weight genuine slate roof. Simply gorgeous.

Call us today for a free, no-obligation consultation and estimate for your next home improvement project.
